#### **DETAILED ACTION**

1. The preliminary amendment filed February 28, 2002 has been received and entered.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 10-11 and 16 are rejected under 35 U.S.C. 102(e) as being anticipated by Hlousek (U.S. Patent No. 6,382,189).

Hlousek teaches a fuel injector for injecting fuel that is at high pressure into the combustion chamber of an internal combustion engine, the injector comprising a control part (5) guided movably in a housing and the control part is movable vertically up and down, actuator actuated (4), in a bore of the housing (3) of the fuel injector. The control

Page 3

Art Unit: 3752

part is being actuated by means of an actuator element (triggers two switching stages; and disposes above the control part) (4) of which moves the control part (5) into a position that enables the fuel delivery into a nozzle inlet (9, 2). Hlousek also teaches a valve chamber (indicated as A) (see Fig. 1) that is being opened and closed during the injection phases by control edges (19, 19') toward the control part, and a pressure relief of the injection nozzle system (11, 12) (see Fig. 1) being effected via leak fuel slides embodied on the control part (col. 2, line 61- col. 3, line 67). The fuel injection system comprises a pressure-relieved to the leak fuel line (11, 13) via an annular chamber (indicated as B) (see Fig. 1) on the lower slide element (7).

## Allowable Subject Matter

3. Claims 12-15 and 17-18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

## Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Homes and Rodriguez-Amaya et al. are cited of general interest.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thach H Bui whose telephone number is 703-305-0063. The examiner can normally be reached on Monday-Friday, 7:30-4 p.m.

Application/Control Number: 10/069,729
